STRUCTURAL NOTES

This blend combines two structurally distinct synthetic peptides. CJC-1295 (no-DAC / Mod GRF 1-29) is a 29-amino-acid analog of the native growth-hormone-releasing hormone fragment GHRH(1-29) with four substitutions (positions 2, 8, 15, 27) introduced to extend in vitro stability against enzymatic cleavage. Ipamorelin is a synthetic pentapeptide ghrelin / GHS-R1a receptor ligand (see [ipamorelin.md](#)). The two peptides are physically co-lyophilized in a single vial, not covalently linked.
