STRUCTURAL NOTES

Selank is a synthetic heptapeptide (7 amino acids) consisting of the natural tetrapeptide tuftsin (Thr-Lys-Pro-Arg; the IgG Fc-derived immunomodulatory tetrapeptide) extended at the C-terminus by the tripeptide Pro-Gly-Pro. The Pro-Gly-Pro extension is a common stabilizing motif used in the Russian peptide research tradition (cf. [Semax](#)). Selank was developed by the Institute of Molecular Genetics of the Russian Academy of Sciences in collaboration with the V.V. Zakusov Institute of Pharmacology.
