STRUCTURAL NOTES

GHRP-2 is a synthetic hexapeptide of the growth-hormone-releasing-peptide class and an agonist of the ghrelin / growth hormone secretagogue receptor (GHS-R1a). Its sequence incorporates D-amino acids and a non-natural D-2-naphthylalanine residue that confer protease resistance and receptor selectivity. It is structurally distinct from the GHRH-analog secretagogues such as [[sermorelin]] and [[cjc-1295-no-dac]].
