STRUCTURAL NOTES

Gonadorelin is the synthetic form of native gonadotropin-releasing hormone (GnRH / LHRH), a decapeptide with an N-terminal pyroglutamate and a C-terminal glycnamide. Unlike the superagonist and antagonist GnRH analogs that carry position-6 and position-10 substitutions, gonadorelin reproduces the unmodified native sequence. It is structurally unrelated to the growth-hormone secretagogues elsewhere in this category.
