STRUCTURAL NOTES

HGH Fragment 176-191 is a synthetic peptide corresponding to the C-terminal region (residues 176 to 191) of the 191-amino-acid human growth hormone molecule. It contains a single intramolecular disulfide bond formed between the two cysteine residues. The fragment is the unmodified parent sequence from which the stabilized analog AOD-9604 is derived; see the [[aod-9604]] datasheet for the modified variant.
